WORK EXPERIENCE

07/2024 - 04/2026

Công ty TNHH Giải pháp phần mềm Việt Á
Full-stack Developer (Backend + Mobile)

- Built and maintained cross-platform mobile applications using React Native for both iOS and Android environments.
- Designed and created database schemas based on project business requirements.
- Built backend APIs using .NET Framework.
- Published production mobile applications to App Store and Google Play, optimizing performance, stability, and user experience.
- Tested, debugged, and optimized applications to ensure stability, security, and scalability.
- Implement the application notification feature through the server and the **OneSignal** library.
- Develop an automatic notification function that sends alerts when there are new promotions or when the user's points are about to expire, using **Windows Service** with the **.NET** platform.
- Native module integration
- Performance optimization
- Modular architecture
- State management optimization

07/2023 - 01/2024

WEALLNET CREATIVE AGENCY
Mobile Developer

Develop and maintain app in alignment with organizational objectives by using Flutter language, responsive pages for different device screen sizes.

- Build interfaces based on Figma design documents.
- Designing APIs using Golang and .NET language.
- Participated in business analysis and designed the database accordingly.
- Fixing bugs and maintaining code.

09/2022 - 2/2023

BOOLFLY VIET NAM COMPANY
Web Developer

- Designing website interfaces using HTML, CSS, and JavaScript, aligning with the job description provided.
- Completed various JavaScript exercises, improving proficiency in the language.

- Designing website interfaces using the Magento framework.
- Contributed to the development of a Magento theme, enhancing front-end and backend development skills.

PROJECTS

08/2025 - 03/2026

Loyaty Booking App

Fullstack

The Loyalty Booking App is a customer engagement and hotel booking platform that enables users to earn and track loyalty points, redeem rewards and promotions, view campaigns, and book hotel rooms. I developed the entire mobile UI, participated in building backend APIs, and contributed to database design. The project helps improve customer retention and enhances the overall booking experience.

02/2025 - 05/2025

Co.op Food App

Mobile

The Co.op Food App is an internal employee attendance management system for retail stores. It enables staff to check in and check out at store locations, records attendance history, and verifies GPS coordinates during check-in. Administrators can view detailed reports by store and by individual employee.

- I developed the entire mobile UI and actively participated in discussing and proposing business solutions for the project.
- Implemented GPS-based attendance verification system for retail employees.
- Developed real-time check-in/check-out workflows with location validation.
- Participated in business analysis and proposed operational improvements for attendance tracking.

08/2024 - 12/2024

Great Wallet App

Mobile Developer

The Great Wallet App is a cryptocurrency application that allows users to create wallets, complete identity verification (KYC), deposit funds to purchase digital currency (Great), and perform transactions such as buying, selling, exchanging, or transferring tokens between users. I developed the entire mobile UI and actively contributed to discussing and proposing business solutions to ensure a secure and seamless user experience.

- Developed a cryptocurrency wallet application supporting wallet creation, KYC verification, token trading, and peer-to-peer transfers.
- Built scalable and reusable mobile UI architecture using React Native.
- Implemented dynamic token/network configuration and transaction flows.
- Collaborated with backend and business teams to improve security and user experience.
- Optimized rendering and state management for smoother real-time interactions.
